AI Developer

Final-year AI student with hands-on experience in computer vision, LLM integration, document intelligence, and workflow automation. Developed production-grade AI pipelines at 10Pearls and built multi-agent systems using YOLO, OCR, and LLM APIs. Seeking a Generative AI or ML internship to contribute to real-world engineering teams.

PROFESSIONAL EXPERIENCE

10Pearls, Machine Learning Intern

Jun 2026–Aug 2026

- Co-developed a dual-engine document intelligence platform integrating **Azure Document Intelligence** and a fine-tuned **GLM-OCR (1.1B)** model to automate structured data extraction from insurance forms (NAF, CNIC, Proposals).
- Fine-tuned GLM-OCR using plain **LoRA (fp16, rank 16)** on a 636-sample dataset of human-verified and synthetic form images; deployed via **SGLang** on Vast.ai GPU servers, reducing inference latency to **1.2 seconds/page**.
- Integrated extraction engines with a Django backend using multi-threaded PDF rendering and built a React key-matcher supporting alias mappings and recursive field search.

FAST-NUCES, FormMate — Multi-Agent Document Intelligence (FYP)

Jan 2025–May 2026

- Designed a multi-agent pipeline (YOLOv11 OBB + Tesseract OCR + FAISS) achieving 69% field detection at 10–15s end-to-end; built Django + React full-stack with JWT auth, RBAC, and ONNX Runtime deployment.

Arch Technologies, Machine Learning Intern

Oct 2024–Nov 2024

- Built and evaluated regression pipelines for a house price prediction system; performed EDA, feature engineering, and cross-validation using Scikit-learn.

EDUCATION

National University of Computing & Emerging Sciences (FAST-NUCES)

Aug 2022–May 2026

Bachelor of Science in Artificial Intelligence

Lahore, Pakistan

Courses: ML, Deep Learning, Computer Vision, NLP, Generative AI, DSA, Databases, OS, Info Security, OOP

PROJECTS

Job Automation Pipeline

Python, Selenium, n8n

- Built an end-to-end tool scraping LinkedIn listings via Selenium + n8n, delivering 500+ listings/week to email with 90% reduction in manual search effort.

Healthcare Ecosystem Platform

Python, Django, MySQL

- Multi-role Django platform connecting patients, doctors, and pharmacists with appointment booking, prescription management, pharmacist dispensing, and 4-role RBAC.

House Price Prediction System

Python, Scikit-learn, XGBoost, Flask, Streamlit

- Trained 5 ML models on a scraped dataset achieving 89–92% accuracy via soft-voting ensemble; deployed as a web app with Flask and Streamlit.

CORE COMPETENCIES

Languages: Python, C, C++, SQL

AI / ML: Machine Learning, Deep Learning, Computer Vision, NLP, LLM Integration, RAG, YOLOv8/v11, OCR (Tesseract), Azure Document Intelligence, FAISS, ONNX

Frameworks: Django, Flask, React, REST APIs, LangChain, OpenCV, Scikit-learn, Pandas, NumPy

Automation & Tools: Selenium, n8n, Git, GitHub, Postman, Linux (Ubuntu), Wireshark

Databases: MySQL, PostgreSQL, MongoDB

Certifications: Agentic AI (Coursera), Generative AI (Coursera), Prompt Engineering (Coursera)

Languages: English (Professional), Urdu (Native)
